

ICD-10 Reference Card for Pulmonology

Diagnosis	Specificity
Associated or Related Conditions	<p>Obesity: include diagnosis and education provided</p> <p>Diabetes: type and/or cause and manifestations</p> <p>Heart Failure: include status and type as Acute and/or Chronic, Systolic and/or Diastolic</p>
Asthma	<p>Classification: Intermittent, Persistent</p> <p>Severity: Mild, Moderate, Severe</p> <p>Temporal Factors: Uncomplicated, Exacerbation, Status Asthmaticus</p>
Bronchitis	<p>Acute or Subacute: Link to organism if suspected (inpatient only) or known</p> <p>Chronic: Simple, Mucopurulent, Mixed</p>
COPD	<p>Temporal Factors: Exacerbation, Decompensation, Baseline</p> <p>Include Associated Conditions: Asthma, Emphysema, Lower Respiratory Tract Infection, Acute/Chronic Bronchitis with specificity (e.g., simple, mucopurulent)</p>
Emphysema	<p>Type: Unilateral, Panlobular, Specify if Other Type</p>
Neoplasms	<p>Primary Site: Anatomic Specificity, Active Condition or Previously Excised</p> <p>Secondary Site(s): Include Anatomic Specific for all Metastatic Sites</p> <p>Pathology Report: Include Pathology Results as Diagnostic Statements</p>
Noncompliance with Prescribed Regimen and/or Medication Under Dosing	<p>Include any noncompliance with prescribed therapies (e.g., smoking cessation) and/or medications</p> <p>***Intentional or unintentional</p> <p>***Reasons for noncompliance (e.g. financial, did not understand instructions)</p>

Pneumonia	<p>Identify the organism (e.g. Viral or bacterial, name the organism if known or suspected, gram positive, gram negative) <i>*** Probable, Likely, Suspected, or any term denoting uncertainty is acceptable terms for inpatient documentation (positive culture not necessary) ***</i></p> <p>Aspiration Pneumonia: Specify substance and identify whether or not it was present on admission (POA)</p> <p>Link associated conditions to the pneumonia (due to): e.g. Sepsis, HIV Disease, Influenza, etc.</p>
Pneumothorax	<p>Type: Spontaneous, Chronic, Traumatic, Postprocedural</p> <p>Associated Details: Primary, Secondary, Tension</p>
Pulmonary Hypertension	<p>Type: Primary or Secondary (link to underlying condition e.g., COPD)</p> <p>Associated Condition: Right Heart Ventricular Strain/Failure, Cor Pulmonale, Acute and/or Chronic</p>
Respiratory Failure	<p>Acuity: Acute, Chronic, Acute and Chronic</p> <p>Type: Hypoxia and/or Hypercapnia</p> <p><i>***Blood gases and mechanical ventilation are not required</i></p> <p>Include Specific Details When Occurring in the Postoperative Period:</p> <p><i>***Due to an underlying condition (e.g., COPD exacerbation, etc.)</i></p> <p><i>***Complication of the procedure</i></p> <p><i>***Complication of anesthesia</i></p>
Tobacco Use and/or Exposure Required for All Pulmonary Diagnoses	<p>Tobacco Use: History of (in remission), Current, Dependence (i.e., Smoker)</p> <p>Nicotine Form: Cigarettes, Chewing Tobacco, Other Forms (e.g., E-Cigarettes)</p> <p>Tobacco Smoke Exposure: Environmental, Occupational</p> <p><i>***Include Withdrawal as applicable***</i></p>

Notes:
